

Effectiveness of Selected Diesel Particulate Matter Control Technologies for Underground Mining Applications: Isolated Zone Study, 2003

Filesize: 8.36 MB

Reviews

This book will never be straightforward to start on reading through but quite enjoyable to learn. Better then never, though i am quite late in start reading this one. Your lifestyle span will probably be convert once you complete reading this publication.

(Dr. Kadin Hane DVM)

EFFECTIVENESS OF SELECTED DIESEL PARTICULATE MATTER CONTROL TECHNOLOGIES FOR UNDERGROUND MINING APPLICATIONS: ISOLATED ZONE STUDY, 2003

Bibliogov, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.NIOSH designed and conducted a study in an underground metal mine to assess the effects of selected diesel emissions control technologies on the concentrations of diesel particulate matter and gases in underground mine air. The control technologies studied included diesel particulate filter (DPF) systems, filtration system with disposable filter elements, diesel oxidation catalytic converter, and biodiesel blends. Each technology was tested on a mining vehicle operated in an isolated area of an underground mine supplied with fresh air. These isolated zone tests allowed for the operation of vehicles under conditions and over duty cycles that closely mimic actual duty cycles of production equipment. The DPF systems reduced the elemental carbon (EC) concentrations in mine air between 88 and 99 . The same systems reduced total particulate matter (TPM) concentrations in mine air by approximately 75 . The biodiesel blends B20 and B50 caused a reduction in the EC concentrations of 26 and 48 , respectively. Those blends also reduced TPM concentrations by 9 and 24 , respectively. The use of #1 diesel fuel reduced EC concentration by 13 compared to #2 diesel fuel. An increase in nitrogen dioxide concentration of up to two times was seen when platinum-catalyzed DPF systems were tested.
